

Improving the detection and prevention of Type 2 diabetes

RightCare has published a casebook from NHS Bradford City CCG entitled [Improving the detection and prevention of Type 2 diabetes – Bradford Beating Diabetes](#). Bradford City CCG identified type 2 diabetes as a priority area for improving the health of the population it serves through higher quality delivery of primary care services. The CCG used the NHS Right Care approach to inform the commissioning and delivery of programmes, using their evidence-based methods and with a clear emphasis on outcomes. They used the three-stage Right Care methodology (Where to look, What to change, How to change) to focus on clinical programmes and identify value opportunities.
